Learning outcomes of the SMP Action LAB

- Develop the skills to recognize and identify the twelve Sustainability Mindset components in daily life, decision making and thinking processes
- Acquire a new vocabulary to describe key developable mindset components
- Increase self-awareness by exploring your personal thinking processes, mental models and personal worldviews underlining your daily interactions
- Identify the impact of your personal thinking processes on sustainability
- Identify which aspects you would like to personally develop and gain ideas on how to do it
- Identify strategies and resources to further develop your and your audience's Sustainability Mindset
- Understand how certain aspects of the mindset result in unsustainable behaviors
- Experience the power of the Sustainability Mindset Principles to accelerate a mindset shift

Why is understanding the Sustainability Mindset Principles important?

For Educators

- The environmental and social challenges shape a new scenario for all professions. What are the competencies and skills educators are developing in their students to equip them to operate successfully and effectively in this new world?
- Educators have an opportunity to expand their impact addressing the foundations of our behaviors, which lay in the mindset.
- To do so, educators need themselves to gain self-mastery of their mindset: How are they unintentionally contributing to the problems?
- How can educators intentionally shape a better world that works for all?
- How can educators accelerate change, by developing a new generation of sustainability-minded professionals?
