SUSTAINABILITY MINDSET PRINCIPLES

ACTION LAB

For Educators

Dr. Isabel Rimanoczy
Author, Convener of the PRME Working
Group of the Sustainability Mindset

Dr. Beate Klingenberg
Professor of Sustainability
and Supply Chain Management

In this online, hands-on Workshop participants alternate learning, trying out, exchanging and debriefing.

20 hours course:

This is a 20-hour course, divided into:

- Fifteen hours facilitated workshop, in five sessions of 3 hours each, with 14 days in between
- Five hours of home assignments for the participants, including a final reflective essay.

Exciting Update! We've merged additional training into this Action Lab, now including a 5th session. In this final session, you will:

- Learn how to use the Sustainability Mindset Indicator (SMI) and interpret the Instructor Reports.
- Explore the exercises and practical applications found in the SMI Resource Workbook

Registration

Individual: USD 320.-

In Company/ Institution: USD 7000.- (max 40 participants)

Check for current dates and reserve your space here:

Suggested reading material:

The Sustainability Mindset Principles

by Rimanoczy, I.

Required reading material:

The SMI Resource Workbook.

Available for Educators and Coaches.

Learning outcomes

- Develop the skills to recognize and identify the twelve Sustainability Mindset components in daily life, decision making and thinking processes
- Acquire a new vocabulary to describe key developable mindset components
- Increase self-awareness by exploring your personal thinking processes, mental models and personal worldviews underlining your daily interactions
- Identify the impact of your personal thinking processes on sustainability
- Identify which aspects you would like to personally develop and gain ideas on how to do it
- Identify strategies and resources to further develop your and your audience's Sustainability Mindset
- Understand how certain aspects of the mindset result in unsustainable behaviors
- Experience the power of the Sustainability Mindset Principles to accelerate a mindset shift

Why is understanding the Sustainability Mindset Principles important?

- The environmental and social challenges shape a new scenario for all professions. What are the competencies and skills educators are developing in their students to equip them to operate successfully and effectively in this new world?
- Educators have an opportunity to expand their impact addressing the foundations of our behaviors, which lay in the mindset.
- To do so, educators need themselves to gain self-mastery of their mindset: How are they unintentionally contributing to the problems?
- How can educators intentionally shape a better world that works for all?
- How can educators accelerate change, by developing a new generation of sustainability-minded professionals?
